EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William C. Gerstenzang on 7/21/05.

2. The application has been amended as follows:

- Claims 13-15 and 17-19 have been cancelled.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: The instantly claimed invention is allowable over the cited prior art, because the cited prior art fails to disclose a process for the treatment of dust and oxygen containing gases, which contain sulfur oxides and nitrogen oxides, at temperatures in the range from 200-500°C by means of reducing agents in a reactor having a solid catalyst with flow passages, in which the free opening surface of the catalyst is more than 50% and in which the passages of the catalyst have a hydraulic diameter of more than 2 mm wherein the treatment in the reactor is performed in the presence of substances comprised of free oxides, carbonates, hydroxides of calcium, magnesium, sodium and potassium, said substances being present in or added to the exhaust gases prior to contact with the catalyst and wherein the operating conditions of the gas flow in the free reaction space corresponding to Froude numbers.

Inoue et al. (US Patent 4,221,768) discloses a reactor comprised of oxides of alkali metals and alkaline metals, but the reference does not disclose wherein free oxides, carbonates, hydroxides of calcium, magnesium, sodium, and potassium, and wherein the substances being present in or added to said exhaust gases prior to contact of said exhaust gases with said catalyst under the claimed reaction conditions.

Graf et al. discloses a process for removing sulfur oxides and optionally other gaseous pollutants from flue gases by means of a reactant such as sodium, potassium, calcium and/or magnesium as an oxide, hydroxide, or carbonate (see abstract). Graf et al. continues to teach wherein the process may also treat nitrogen oxides and wherein the reactor is controlled according to the Froude number (col. 3, line 50 – col. 4, line 18). However, Graf et al. is directed towards a process, which utilizes a fluidized bed and not a solid catalyst process as instantly claimed in the present invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
